To the respective natl. health authority

Patient notification with suspicion of occupational skin cancer

Outdoor workers who are required to spend long periods of time working in the sun, year after year, have an at least doubled risk of skin cancer. In many European countries these arising cancers are acknowledged as occupational disease. Therefore, the following patient will by this form, which complies to the recommendations of the EU H2020 COST Action StanDerm, be notified to the respective occupational health authorities after informed consent.

Name, surname	
Date of birth	
Age	
Nationality	
Gender	
Address	

- 1) Occupation(s) of the patient:
- 2) Since how many years is the patient working in that/these occupation(s):
- 3) Pt's skin type of the patient: fair / ... / dark (or: I, II, VI)
- 4) The patient spends outdoors more than
 - a. 50% of his/her working time Y N
 - b. 70% of his/her working time Y N
 - Usually outdoors between 10 am and 2 pm? Y N
- 5) When did the first sign of skin cancer occur, e g A K?
- 6) Has the patient consulted a doctor in the past 6 (or 12) months due to a suspicious skin lesion? If so: which doctor/specialist?

- Delphi-Process on a "Consensus Statement on the acknowledgment, prevention, diagnosis and treatment of OSC"
- National epidemiologic studies on prevalence and riskfactors for OSC in Italy, Scandinavia, Romania
 - Preparation of patient information material

- Information material (e.g. brochures, leaflets) for prevention of solar induced skin cancer primarily address the general population
- Some information material available specifically addressing outdoor workers (e.g. Skin Cancer Foundation)
- Lack of standardized material in different languages

Proposal:

- To find agreement on a list of general recommendations for prevention of skin cancer in outdoor workers
- To translate the list in different languages
- To place the list in different languages on the StanDerm homepage as an outcome of WG3
- To consider using the list for developing a StanDerm brochure

A workplace sun protection program

Health and safety legislation in each Australian state requires your employer to provide a safe working environment.

If you work outdoors and your workplace does not offer any sun protection measures, raise the issue with your health and safety representative or manager.

This legislation also states that, as an employee, you must cooperate with your workplace's sun protection program, so be sure to cover up against the sun.

If self-employed, it is in your best interest to look after yourself and use sun protection at work.

Your state or territory Cancer Council may be able to assist your workplace with its sun protection policy and resources.

If your job requires you to work outside, tax deductions are available for sun protection products. Talk to your tax advisor or contact the Tax Office by calling 13 28 61 or visiting their website at ato.gov.au

Looking out for skin cancer

Skin cancer can be successfully treated if found early. However, skin cancer can be fatal if left untreated.

We should all be aware of what is normal for our skin, especially as we get older. Skin cancer can grow quickly. Never rely solely on workplace skin cancer checks to detect skin cancer. If you notice any changes to your skin or have any concerns about skin cancer then you should talk to your doctor as soon as possible. Contact your state or territory Cancer Council for more information on knowing your skin and what to look for.

How to check your skin

- Check your whole body, including the soles of your feet, between your toes, your armpits, ears, eyelids, under your fingernails and scalp.
- Use a hand-held mirror, or have someone help you, to check areas you cannot see such as your back, the back of your neck and legs.
- Look for a new spot or a spot that is different from the ones around it.
- Look for a sore that does not heal.
- Look for a spot or mole that has changed in size, shape or colour.

See your doctor as soon as possible if you notice anything unusual.
